CONTENTS

FOREWORD vii
LIST OF TABLES ix
NOTATION xi
1. INTRODUCTION 1
1.1. *Aims and Topics of the Treatise* 1
1.2. *Historical Background* 3
2. THE FUNDAMENTALS OF DISLOCATION DYNAMICS 11
2.1. *The Glide Resistance and Dislocation Shape* 11
2.1.1. *Forces on a dislocation* 12
2.1.2. *Drag resistance* 19
2.1.3. *Lattice resistance and the kink-mode of dislocation-motion* 21
2.1.4. *Obstacle resistance and the bowing-mode of dislocation motion* 24
2.2. *Thermodynamics and Dislocation Dynamics* 36
2.2.1. *General consideration* 38
2.2.2. *The rate of activation over local obstacles* 41
2.2.3. *The activation free enthalpy for surmounting obstacles* 50
2.2.4. *The rate of activation over linear barriers* 54
3. THERMALLY ACTIVATED VELOCITY OF DISLOCATIONS IN BOWING-MODE CRYSTALS 64
3.1. *Two-Dimensional Thermally Activated Dislocation Glide through Randomly Distributed Obstacles* 66
3.1.1. *Assumptions and approximations* 67
3.1.2. *Thermally activated velocity* 72
3.2. *Statistics of the Thermally Activated Motion* 75
3.2.1. *Statistical characteristics of moving dislocations* 75
3.2.2. *Stationary distributions and dislocation velocity* 84
3.3. *Computer Simulation of Dislocation Motion* 90
3.3.1. *Simulation procedures and algorithms* 91
3.3.2. *Dislocation motion features revealed by computer simulation* 96
3.3.3. *The dislocation velocity: computer simulation and experimental data* 114
3.4. *Special Effects in the Dislocation Velocity* 131
3.4.1. *Dislocation viscosity and inertial contributions* 132
3.4.2. *Obstacle diffusion and dislocation drag* 143
4. THERMALLY ACTIVATED VELOCITY OF DISLOCATIONS IN KINK-MODE CRYSTALS 148
4.1. *Dislocation Motion in Ideal Kink-Mode Crystals* 150
4.1.1. *Thermally activated velocity* 150
4.1.2. *Experimental data and the comparison with bowing-mode crystals* 158
4.2. *The Mixed Kink-Obstacle Mode of Dislocation Motion* 184
4.2.1. *A collison kink regime* 185
4.2.2. *A collision-less kink regime with variations in dislocation shape* 196
4.3. *Influence of Fine and Electronic Structure of Dislocations* 206
4.3.1. *Dissociation and fine structure of moving dislocations* 206
4.3.2. *The dislocation charge and electronic excitation* 211
5. VISCOUS MOTION OF DISLOCATIONS 221
5.1. *Dislocation Motion Features in the High-Velocity Region* 223
5.2. *Phonon Drag* 232
5.2.1. *Anharmonic phonon drag* 233
5.2.2. *Other phonon contributions* 244
5.3. *Electron Drag* 251
5.3.1. *Electronic drag in normal metals* 252
5.3.2. *Drag in superconductors* 260
5.4. *Magnon Drag* 264
5.5. *Extrinsic Dissipative Mechanisms* 272
5.6. *Kink Drag* 274
6. EXPERIMENTAL RESULTS 277
6.1. *Techniques* 278
6.1.1. *Samples* 279
6.1.2. *Methods for revealing the dislocation motion* 280
6.1.2.1. *Etch pits* 281
6.1.2.2. *X-Ray topography* 291

6.1.2.3. *Transmission electron microscopy* 293
6.1.2.4. *Observation of slip lines in motion* 298
6.1.3. *Introduction of movable dislocations into the crystal* 303
6.1.4. *Methods of loading* 305
6.1.5. *Alternative methods of velocity measurement* 306
6.1.6. *Features and precautions in velocity measurement* 314
6.2. *Bowing-Mode Crystals* 317
6.2.1. *Metals* 317
6.2.1.1. fcc *Metals* 318
6.2.1.2. bcc *Metals* 321
6.2.1.3. hcp *Metals and ordered alloys* 332
6.2.2. *Ionic crystals* 336
6.3. *Kink-Mode Crystals* 370
6.3.1. *Elemental semiconductors* 371
6.3.2. *Compound semiconductors* 386
6.4. *High Velocity Region* 400
6.5. *Externally-Induced Effects* 407
6.5.1. *Influence of irradiation* 408
6.5.2. *Excitation effects* 422
6.5.3. *Hydrostatic pressure influence* 428
7. Motion of Slip Lines 434
7.1. *Features of Array Motion and Smeared-out Obstacle Models of Arrays* 435
7.2. *Discrete Obstacle Model* 448
7.3. *Continuum Approximation* 468
8. Plastic Deformation and Dislocation Dynamics 470
8.1. *Plastic Deformation as a Dynamic Dislocation Process* 471
8.1.1. *Strain rate equations* 472
8.1.2. *The concept of internal stresses* 477
8.1.3. *Stress–strain curves* 480
8.2. *Initial Stages of Plastic Deformation* 487
8.2.1. *Nucleation and motion of dislocations* 487
8.2.2. *Yield point and easy glide* 497
8.3. *Work Hardening* 502
8.3.1. *Stage I and dipole hardening* 503
8.3.2. *Stage II and forest dislocations* 507
8.4 *Conclusion* 512
Appendices 513
